

A DOCTOR OF CHIROPRACTIC

A Doctor of Chiropractic (D.C.) is a licensed physician who is trained to diagnose and provide care for musculoskeletal (muscle and joint) and related neurological disorders. They are primarily concerned with disorders that alter nervous system regulation and interfere with its ability to restore and preserve health.

Chiropractors specialize in the practice of manipulative therapy (called "adjustments") of the spine and extremities. Manipulative therapy's benefits can include decreased pain and increased range of motion, as well as improvement in the function of the circulatory, immune, digestive and nervous system.

Chiropractors may also utilize therapeutic massage, rehabilitative exercises, physical therapy modalities and nutritional recommendations in their approach to patient care. They perform routine physical examinations, including orthopedic and neurological testing, and can write prescriptions for other procedures, such as laboratory tests, x-rays and MRIs. Chiropractors may coordinate care with other health care providers, or refer a patient to a specialist for evaluation and treatment.

Chiropractors must complete 6-8 years of college education and then pass national and state board examinations to become licensed. The total hours spent studying basic sciences, and the textbooks used, in chiropractic schools and medical schools are similar. Chiropractic schools place greater emphasis, than medical schools, on the study of spinal biomechanics, nutrition and the nervous system.

Chiropractic care has been proven to be safe and effective for various health disorders. There is evidence that chiropractic care is more effective, and has a much lower risk rate, than medical care, for headaches, neck and back pain.

For more than 100 years, patients of all ages have benefited from chiropractic care. Governments and health authorities in many countries recognize the practice of chiropractic. Chiropractic care is one of the most utilized forms of complementary and alternative medicine in the U.S.
